

Coronavirus Disease 2019 (COVID-19)

On February 11, 2020 the World Health Organization **announced** an official name for the disease that is causing the current outbreak of coronavirus disease, COVID-19. CDC will be updating our website and other CDC materials to reflect the updated name.

Case Report Form for 2019 Novel Coronavirus

The Case Report Form is intended for local and state health departments who have a laboratory confirmed case of 2019-nCoV to report to CDC.

2019 novel coronavirus (2019-nCoV) is a newly emerged coronavirus spreading from person-to-person. There is much to be learned about this illness. As cases are identified in the United States, CDC is working with state and local health departments to prevent further spread of 2019-nCoV and to collect information to better understand the virus. As part of this response, CDC has developed a case report form to assist our partners in characterizing laboratory-confirmed 2019-nCoV cases. The form provides a standardized approach to collecting data in order to track the outbreak, better characterize cases, and inform the public health response.

The 2019-nCoV Case Report Form is designed to collect key information on laboratory-confirmed 2019-nCoV case-patients, including:

- Demographic, clinical, and epidemiologic characteristics
- Exposure and contact history
- Course of clinical illness and care received

The 2019-nCoV Case Report Form and supplement resources are available:

- [2019-nCoV Case Report Form](#)  [PDF]
